Saab 96 & V4 Graham Robson 2010-04-15 The front-wheel-drive Saab 96 made the brand into a rally icon in the 1960s. It succeeded in events as diverse as the Monte Carlo, Britain's RAC rally, special stage events in every Scandinavian country, and the rough-and-tough Spa-Sofia-Liege Marathon. The big change came in 1967, when the 96 became the V4. Works cars continued to be competitive in carefully chosen events for many years, and when they became outdated, the V4's successors – the much larger and more powerful 99 and 99 Turbo types – proved that Saab wasn't done with rallying yet. More than any other car of its era, the 96 and V4 models proved that front-wheel-drive allied to true superstar driving could produce victory where no-one expected it.

Environmental Information in Instructions for Use of Consumer Products Ari Nissinen 2005-03-11 The European Union has highlighted the issue of environmentally sound use of products in the context of Integrated Product Policy, IPP. Accordingly, consumers should have easy access to understandable, relevant and credible environmental information. Information about product characteristics is available in different forms and sources, but in many cases, relevant environmental information is not available on the product itself. The study described in this report was initiated in order to produce information on the state of user instructions regarding environmental information. User manuals of passenger cars and refrigerators were focused on, examining the advice which could diminish the harmful environmental effects of the use of these products. Other studied products included such durable products as textiles and furniture as well as such consumables as cleaning chemicals and recyclable paper products. The study raised many ideas about actions that could promote the status and 'eco-development' of instructions for use.
