Building Excellence in Higher Education Arnoud De Meyer 2021-08-26 Over the last 30 years, Singapore has developed a system of higher education that is the envy of many other countries and regions. How has Singapore developed such a highly performing education system? Was it planned? Was it mere luck? Written by Arnoud De Meyer, who is widely regarded as one of the pre-eminent management educators and leaders in higher education, the book focuses on Singapore as an in-depth case study of how to build a system of higher education, and specifically a portfolio of highly differentiated and diversified universities. He worked closely together with Jovina Ang during the preparation of the manuscript. This book is unique because it showcases several case studies of the emerging system of higher education, and it was written based on insights drawn from interviews with the key decision-makers and actors in the system from the past 20 years, including ministers and permanent secretaries of the Ministry of Education, and presidents and chairmen of the six universities. The success of this system can be attributed to several factors: the clarity of purpose of the decision-makers, with clear targets in cohort participation rate, commitment to significant funding for education and research, discipline of an intelligent and well-implemented governance system, flexibility in adjusting plans, and rapid and adaptive learning from overseas partners. In the last few chapters, the authors look at the future of the system and postulate how it should be adjusted to the changes in Singapore and the world. This unique book on educational strategy would be of particular interest to educational specialists and policy-makers in emerging countries who want to build a system of higher education, policy-makers in mature industrialised countries who are faced with the challenge of revamping their system of higher education, strategists who are interested in dynamic capability building and philanthropists who want to use education as an equaliser of social status.

The Adult Learner Malcolm S. Knowles 2020-12-21 How do you tailor education to the learning needs of adults? Do they learn differently from children? How does their life experience inform their learning processes? These were the questions at the heart of Malcolm Knowles' pioneering theory of andragogy which transformed education theory in the 1970s. The resulting principles of a self-directed, experiential, problem-centred approach to learning have been hugely influential and are still the basis of the learning practices we use today. Understanding these principles is the cornerstone of increasing motivation and enabling adult learners to achieve. The 9th edition of The Adult Learner has been revised to include: Updates to the book to reflect the very latest advancements in the field. The addition of two new chapters on diversity and inclusion in adult learning, and andragogy and the online adult learner. An updated supporting website. This website for the 9th edition of The Adult Learner will provide basic instructor aids. For each chapter, there will be a PowerPoint presentation, learning exercises, and added study questions. Revisions throughout to make it more readable and relevant to your practices. If you are a researcher, practitioner, or student in education, an adult learning practitioner, training manager, or involved in human resource development, this is the

definitive book in adult learning you should not be without.

Key Concepts in Adult Education and Training Malcolm Tight 2012-11-12 As adults, we are all continually involved in learning, with increasing numbers of us engaged in more formalized forms of learning; that is, in education or training. All those involved in the broad field of adult education and training will come into contact with many specialist ideas or concepts. It is often assumed of students that they already have a general understanding of these concepts, their meanings, applicability and inter-relationships. This is not always the case. This book examines in detail over forty of these key concepts, ranging from community education and experiential learning to competence and access. It presents a clear, analytical discussion in jargon-free language. It is, therefore, indispensable to all students and practitioners of adult education and training.

Pre-Service and In-Service Teacher Education: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources 2018-11-02

How People Learn National Research Council 2000-08-11 First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior.

This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do--with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-

depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
