2012-03-26 Semiotics is the theory of signs, and reading signs is a part of everyday life: from road signs that point to a destination, to smoke that warns of fire, to the symbols buried within art and literature. Semiotic theory can, however, appear mysterious and impenetrable. This introductory book decodes that mystery using visual examples instead of

abstract theory. This new edition features an expanded introduction that carefully and clearly presents the world of semiotics before leading into the book's 76 sections of key semiotic concepts. Each short section begins with a single image or sign, accompanied by a question inviting us to interpret what we are seeing. Turning the page, we can compare our response with the theory behind the sign, and in this way, actively engage in creative thinking. A fascinating read, this book provides practical examples of how meaning is made in contemporary culture.

Kali's Child Jeffrey J. Kripal 1995-10-16 The nineteenth-century Bengali mystic Ramakrishna played a major role in the development of Hinduism and is regarded as a modern saint. Yet he remains an enigma to followers unable to reconcile his saintly status with his eroticized language and actions. In this work, Jeffrey J. Kripal attempts to untangle the paradox. He demonstrates that Ramakrishna's famous mystical experiences were driven by erotic energies that he neither fully accepted nor understood; the key to understanding this extraordinary figure, Kripal argues, lies in Tantra and its ritual, symbolic, and doctrinal equation of the mystical and the erotic. Moving through Ramakrishna's world both chronologically and conceptually, Kali's Child employs two complementary interpretive strategies, a nuanced phenomenological reinterpretation of original Bengali texts and a nonreductive psychoanalytic reading of Ramakrishna's mystical eroticism. Kripal shows how the heterosexual structure of Tantric symbolism, the abusive way its rituals were often forced upon the saint, and Ramakrishna's own homosexual desires all came together to produce in him profound feelings of shame, disgust, and fear. Kripal establishes that the homosexuality of this great, if unwilling, Tantric mystic is linked inextricably to virtually every aspect of

his life and teachings.

**Conversations on the Uses of Science and Technology**  
Norman Hackerman 1996 In the interest of reducing financial support some policy makers in Washington and in state capitols are questioning the contributions of science to

society. Or they believe research can be made more useful if it is controlled and directed by government to solve specific problems. The authors disagree with both these strategies and discuss how understanding nature (that is, science) is the underpinning of humankind's progress in improved comforts, economic progress, and health. In making their case they also address the primary requirement of ensuring a pool of competent scientists, mathematicians, and engineers as well as the need for educating non-scientists about science.

Interactive Broadband Media Nikolaus Mohr 2013-06-29 This book serves as a guide for companies to explore the path from traditional media to the new world of interactive broadband media. The key challenge is to base indispensable future investments on reliable business models. This book offers a comprehensive set of concepts and strategies for the interactive broadband realm, grounded in attractive service offerings and customer preferences. The authors explain and analyze the interaction of broadband technologies, its processes and the end customers' point of view. At the same time they provide current examples of successful long-term business models. By applying Accenture's tried and tested Get Audience / Sell Audience concept, companies can assess their position in the interactive broadband value chain and optimize their strategies accordingly.

Transition Metal Impurities in Semiconductors K. A. Kikoin 1994 This book discusses the theory of the electron states of transition metal impurities in semiconductors in connection with the general theory of isoelectronic impurities. It contains brief descriptions of the experimental data available for transition metal impurities belonging to iron, palladium and platinum groups and for rare-earth impurities in elemental semiconductors (III-IV, II-VI and IV-VI compounds) and in several oxide compounds ( $Ti_2$ ,  $BaTiO_3$ ,  $SrTiO_3$ ). Also included are applications of the theory to the optical, electrical and resonance properties of semiconductors doped by the transition metal impurities. The book presents a theory unifying previously proposed ligand-field and band descriptions of transition metal impurities. It describes the theory in the context of the general theory of neutral impurities in semiconductors and demonstrates the capabilities of this description to explain the basic experimental properties of semiconductors doped by transition metal impurities. A detailed discussion of various experimental results and their theoretical interpretation is carried out. This book comprises three parts. The first two parts consider several exactly solvable models and describe numerical techniques. All the models and simulations constitute a general pattern describing transition metal and rare-earth impurities in semiconductors. The final part uses this theory in order to address various experimentally observed properties of these systems.

Politics in Taiwan Shelley Rigger 1999 "Politics of Taiwan is an accessible and highly readable survey of the Taiwanese political situation spanning from 1949 to the present. With a focus on the issue of democratization, Shelley Rigger covers Taiwan's complicated and unique political history, and tells the story of how Taiwanese, demanding a stonger voice in politics, drove their government to reinvent itself on a democratic blueprint. This book shows that Taiwan, unlike other countries, avoided serious economic disruption and

social conflict, and arrived at its goal of multi-party competition with little bloodshed"--Publisher description.
