Medical Bondage Deirdre Cooper Owens 2017-11-15 The accomplishments of pioneering doctors such as John Peter Mettauer, James Marion Sims, and Nathan Bozeman are well documented. It is also no secret that these nineteenth-century gynecologists performed experimental caesarean sections, ovariectomies, and obstetric fistula repairs primarily on poor and powerless women. Medical Bondage breaks new ground by exploring how and why physicians denied these women their full humanity yet valued them as "medical superbodies" highly suited for medical experimentation. In Medical Bondage, Cooper Owens examines a wide range of scientific literature and less formal communications in which gynecologists created and disseminated medical fictions about their patients, such as their belief that black enslaved women could withstand pain better than white "ladies." Even as they were advancing medicine, these doctors were legitimizing, for decades to come, groundless theories related to whiteness and blackness, men and women, and the inferiority of other races or nationalities. Medical Bondage moves between southern plantations and northern urban centers to reveal how nineteenth-century American ideas about race, health, and status influenced doctor-patient relationships in sites of healing like slave cabins, medical colleges, and hospitals. It also retells the story of black enslaved women and of Irish immigrant women from the perspective of these exploited groups and thus restores for us a picture of their lives.

The Changing Frontier Adam B. Jaffe 2015-08-14 In 1945, Vannevar Bush, founder of Raytheon and one-time engineering dean at MIT, delivered a report to the president of the United States that argued for the importance of public support for science, and the importance of science for the future of the nation. The report, *Science: The Endless Frontier*, set America on a path toward strong and well-funded institutions of science, creating an intellectual architecture that still defines scientific endeavor today. In *The Changing Frontier*, Adam B. Jaffe and Benjamin Jones bring together a group of prominent scholars to consider the changes in science and innovation in the ensuing decades. The contributors take on such topics as changes in the organization of scientific research, the geography of innovation, modes of entrepreneurship, and the structure of research institutions and linkages between science and innovation. An important analysis of where science stands today, *The Changing Frontier* will be invaluable to practitioners and policy makers alike.

The Ultimate Guide To Choosing a Medical Specialty Brian Freeman 2004-01-09 The first medical specialty selection guide written by residents for students! Provides an inside look at the issues surrounding medical specialty selection, blending first-hand knowledge with useful facts and statistics, such as salary information, employment data, and match statistics. Focuses on all the major specialties and features firsthand portrayals of each by current residents. Also includes a guide to personality characteristics that are predominate with practitioners of each specialty. "A terrific mixture of objective information as well as factual data make this book an easy, informative, and interesting read." --Review from a 4th year Medical Student

The Relentless Moon Mary Robinette Kowal 2020-07-14 Finalist 2021 Hugo Award for Best Novel! Finalist 2021 Hugo Award for Best Series! A 2021 Locus Award Finalist! Mary Robinette Kowal continues her Hugo and Nebula award-winning *Lady Astronaut* series, following *The Calculating Stars* and *The Fated Sky*, with *The Relentless Moon*. The Earth is coming to the boiling point as the climate disaster of the Meteor strike becomes more and more clear, but the political situation is already overheated. Riots and sabotage plague the space program. The IAC's goal of getting as many people as possible off Earth before it becomes uninhabitable is being threatened. Elma York is on her way to Mars, but the Moon colony is still being established. Her friend and fellow Lady Astronaut Nicole Wargin is thrilled to be one of those pioneer settlers, using her considerable flight and political skills to keep the program on track. But she is less happy that her husband, the Governor of Kansas, is considering a run for President. Popular Science 2002-12 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Theory of Reality David O. Wiebers 2012 "The Theory of Reality combines key elements of neuroscience, physics and metaphysical science to provide critical evidence for existence beyond the brain with practical everyday application for increased compassion, effectiveness and higher understanding in your life.

Discover worldview-changing evidence regarding the most basic and profound questions of humankind, and explore the fundamental fabrics of our universe and the purpose of our lives. Equip yourself with new knowledge and empowering tools and techniques designed to help you "put it all together" and chart your own spiritual adventure. Take control of your own life journey and allow inspiration, uncommon creativity and greater happiness to unfold."

Thirteenth Child Patricia C. Wrede 2010 Eff must finally get over believing she is bad luck and accept that her special training in Aphrikan magic, and being the twin of the seventh son of a seventh son, give her extraordinary power to combat evil magical creatures.

Bandit Algorithms Tor Lattimore 2020-07-16 A comprehensive and rigorous introduction for graduate students and researchers, with applications in sequential decision-making problems.

Invasive Procedures Orson Scott Card 2009-11-30 Orson Scott Card and Aaron Johnston's taut thriller *Invasive Procedures* takes readers a few years into the future, and shows the promise and danger of new genetic medicine techniques. George Galen is a brilliant scientist, a pioneer in gene therapy. But Galen is dangerously insane – he has created a method to alter human DNA, not just to heal diseases, but to "improve" people – make them stronger, make them able to heal more quickly, and make them compliant to his will. Frank Hartman is also a brilliant virologist, working for the government's ultra-secret bio-hazard agency. He has discovered how to neutralize Galen's DNA-changing virus, making him the one man who stands in the way of Galen's plan to "improve" the entire human race. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Unsettling the West Jo Ann Levy 2004 By the end of 1849, an estimated thirty-nine thousand gold-seekers had arrived in San Francisco by sea, and some thirty thousand others had crossed the continent on land. Another eighty-six thousand would arrive in 1850. According to the census for that year, there were twelve men for every woman in California. But who would want them? The words "gold rush" generate at best an image of raucous, all-male camaraderie, at worst a storm of lawless and irredeemable violence. Eliza Wood Burhans Farnham, a young widow who had already generated considerable attention for herself as the matron of Sing Sing prison, had a vision for California. "Woman, with all her kindly cares and powers, so peculiarly conservative to man under such circumstances," would bring a civilizing influence to the state. Farnham's vision went beyond gentility however, to a society in which individuals -- male or female -- could fulfill their potential, and virtues championed by free-thinking New England philosophers would reign supreme. The realities of everyday life in

gold-rush California were daunting, but when Farnham's friend Georgiana Bruce (later Kirby) joined her the following year, hope returned in full measure: "She fills up a great place in my dark world and comes to me like a pleasant breeze or a bright sun after one of our long rains. We are going to be very independent and free...dashing about at our discretion." The stories of these "sisters on the way to the vast Beyond," as Farnham called them, could not be told separately. With insight, wit, and telling detail, JoAnn Levy relates the scope and outcome of their quest for human perfectibility in this account of two remarkable and redoubtable women in frontier California. Book jacket.

Popular Mechanics 2000-01 Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle.

Betty Zane Zane Grey 2015-06-12 A Fictional Telling of a Real Revolutionary War Heroine "But what can women do in times of war? They help, they cheer, they inspire, and if their cause is lost they must accept death or worse. Few women have the courage for self-destruction. "To the victor belong the spoils," and women have ever been the spoils of war." ? Zane Grey, Betty Zane Betty Zane was a strong, young frontier woman living in a man's world. In this, Zane Grey's first novel, Betty and her brothers live in Fort Henry, West Virginia and are key figures in one of the last battles of the Revolutionary War.

Final Frontier Brian Clegg 2014-08-19 Star Trek was right — there is only one final frontier, and that is space... Human beings are natural explorers, and nowhere is this frontier spirit stronger than in the United States of America. It almost defines the character of the US. But the Earth is running out of frontiers fast. In Brian Clegg's The Final Frontier we discover the massive challenges that face explorers, both human and robotic, to uncover the current and future technologies that could take us out into the galaxy and take a voyage of discovery where no one has gone before... but one day someone will. In 2003, General Wesley Clark set the nation a challenge to produce the technology that would enable new pioneers to explore the galaxy. That challenge is tough — the greatest we've ever faced. But taking on the final frontier does not have to be a fantasy. In a time of recession, escapism is always popular — and what greater escape from the everyday can there be than the chance of leaving Earth's bounds and exploring the universe? With a rich popular culture heritage in science fiction movies, books and TV shows, this is a subject that entertains and informs in equal measure.

Elizabeth Blackwell, M.D. (1821-1910) Nancy Ann Sahli 1974 Hobart and William Smith Colleges present a biographical sketch of the British-born American physician Elizabeth Blackwell (1821-1910). Blackwell was the first woman to be awarded a medical degree in the United States. Blackwell received her medical degree in 1849 from Geneva College in New York state. In 1853, Blackwell opened a dispensary in New York City, which later became the New York Infirmary for Women and Children in 1868. Blackwell was instrumental in the founding of the National Health Society. She was a pioneer in preventive medicine and in the promotion of antiseptics and hygiene. A portrait of Blackwell is provided.

The Children's Table Anna Mae Duane 2013-06-01 Like the occupants of the children's table at a family dinner, scholars working in childhood studies can seem sidelined from the "adult" labor of humanities scholarship. The Children's Table brings together scholars from architecture, philosophy, law, and literary and cultural criticism to provide an overview of the innovative work being done in childhood studies--a transcript of what is being said at the children's table. Together, these scholars argue for rethinking the academic seating arrangement in a way that acknowledges the centrality of childhood to the work of the humanities. The figure we now recognize as a child was created in tandem with forms of modernity that the Enlightenment generated and that the humanities are now working to rethink. Thus the growth of childhood studies allows for new approaches to some of the most important and provocative issues in humanities scholarship: the viability of the social contract, the definition of agency, the performance of identity, and the construction of gender, sexuality, and race. Because defining childhood is a means of defining and distributing power and obligation, studying childhood requires a radically altered approach to what constitutes knowledge about the human subject. The diverse essays in The Children's Table share a unifying premise: to include the child in any field of study realigns the shape of that field, changing the terms of inquiry and forcing a different set of questions. Taken as a whole, the essays argue that, at this key moment in the state of the humanities, rethinking the child is both necessary and revolutionary.
