This book is BARE ACT of Indian Law on internet and cyber act or cyber rules within Indian territories. It is the hardcore set of rules as exactly provided by Indian government authorities. Internet censorship in India is selectively practiced by both federal and state governments. While there is no sustained government policy or strategy to block access to Internet content on a large scale, measures for removing content have become more common in recent years. However, websites blocked either by the government or Internet service providers can often be accessed through proxy servers (see Internet censorship circumvention). The Information Technology Act, 2000 (also known as ITA-2000, or the IT Act) is an Act of the Indian Parliament (No 21 of 2000) notified on 17 October 2000. An Act to provide legal recognition for transactions carried out by means of electronic data interchange and other means of electronic communication, commonly referred to as "electronic commerce", which involve the use of alternatives to paper-based methods of communication and storage of information, to facilitate electronic filing of documents with the Government agencies and further to amend the Indian Penal Code, the Indian Evidence Act, 1872, the Bankers' Books Evidence Act, 1891 and the Reserve Bank of India

Act, 1934 and for matters connected therewith or incidental thereto. The original Act contained 94 sections, divided in 19 chapters and 4 schedules. The laws apply to the whole of India. Persons of other nationalities can also be indicted under the law, if the crime involves a computer or network located in India. The Act provides legal framework for electronic governance by giving recognition to electronic records and digital signatures. CYBER CRIME AGAINST WOMEN IN INDIA

–INVESTIGATIVE AND LEGISLATIVE CHALLENGES

Adv. Shruti Bist 2020-07-25 The Internet's increasing scope, the rapid proliferation of ICTs for mobile information and communications technologies) and the wide distribution of social media have created new opportunities. Cyber-VAWG is emerging as a global issue

with serious implications for global societies and economies. Cyber-crimes targeting women and children are on rise. 1 In the online world, women and children have been found to be very gullible, with cybercrimes against women and children witnessing a sharp rise in the last few years. Women are usually subjected to cybercrimes such as cyber harassment, online stalking, cyber pornography, cyber defamation, matrimonial fraud and much more. The right to the Internet is a human right, as declared in June 2016 by the United Nations Council on Human Rights. The cyber world as such has a virtual reality where anyone can hide or even falsify their identity, this internet gift is used by the criminally minded to commit wrongdoing and then hide under the internet's blanket. The paper identifies common forms of cyber-crimes against women, such as cyber stalking, cyber pornography, circulating images / morphing, sending obscene / defamatory / annoying messages, online trolling / bullying / blackmailing / threat or intimidation, and email spoofing and impersonation. It recommends further steps that need to be taken to deal holistically and effectively with cybercrimes against women. While India's Internet population may explode, social network users experience a looming gender imbalance. This can be seen in areas such as the number of internet users, the number of users on Facebook and Twitter, digital literacy and political tweets. Cybercrimes generally incepted by fake ids generated on Facebook, Twitter and other social media sites that cause severe harm to women, severe blackmailing, intimidation, bullying, or cheating via messenger messages and email are committed by the

perpetrators. Ill-intentioned people commit these cyber-crimes with mischievous intent such as illicit gain, vengeance, insult to a woman's dignity, extort, blackmail, defamation, and steal information.

These technologies have a complicated and multifarious relationship with security.00This book combines theoretical discussions of the concepts at stake and case studies following the relevant developments of ICT and data-driven technologies.
