Forcibly Displaced World Bank 2017-08-01 The Syrian refugee crisis has galvanized attention to one of the world's foremost challenges: forced displacement. The total number of refugees and internally displaced persons, now at over 65 million, continues to grow as violent conflict spikes. This report, *Forcibly Displaced: Toward a Development Approach Supporting Refugees, the Internally Displaced, and Their Hosts*, produced in close partnership with the United Nations High Commissioner for Refugees (UNHCR), attempts to sort fact from fiction to better understand the scope of the challenge and encourage new thinking from a socioeconomic perspective. The report depicts the reality of forced displacement as a developing world crisis with implications for sustainable growth: 95 percent of the displaced live in developing countries and over half are in displacement for more than four years. To help the displaced, the report suggests ways to rebuild their lives with dignity through development support, focusing on their vulnerabilities such as loss of assets and lack of legal rights and opportunities. It also examines how to help host communities that need to manage the sudden arrival of large numbers of displaced people and that are under pressure to expand services, create jobs, and address long-standing development issues. Critical to this response is collective action. As work on a new Global Compact on Responsibility Sharing for Refugees progresses, the report underscores the importance of humanitarian and development communities working together in complementary ways to support countries throughout the crisis†•from strengthening resilience and preparedness at the onset to creating lasting solutions.

Back on track! Successful management techniques to get a company out of debt pile Olga Bieck 2014-02-01 The present work is analysing the successful turnaround of the Japanese car manufacturer Nissan in 1999 to 2001. Very often transformational change fails due to different factors, in most cases though due to the insufficient employee's motivation or due to cultural problems when two international partners try to gain the competitive advantage through merger or alliance. To analyse the successful turnaround of Nissan after its alliance with Renault, a 'new' model for conducting organizational change was introduced. The provided framework unites both actions and attitudes, necessary for motivating employees and establishing new structural and cultural patterns. The example of Nissan proved that clear analysis of the present situation, cross-border communication during the whole transformational process, the sense of urgency established from the very beginning and total commitment of top management and employees are the vital factors that define the success of transformational intention.

Heritage Futures Rodney Harrison 2020-07-28 Preservation of natural and cultural heritage is often said to be something that is done for the future, or on behalf of future generations, but the precise relationship of such

practices to the future is rarely reflected upon. Heritage Futures draws on research undertaken over four years by an interdisciplinary, international team of 16 researchers and more than 25 partner organisations to explore the role of heritage and heritage-like practices in building future worlds. Engaging broad themes such as diversity, transformation, profusion and uncertainty, Heritage Futures aims to understand how a range of conservation and preservation practices across a number of countries assemble and resource different kinds of futures, and the possibilities that emerge from such collaborative research for alternative approaches to heritage in the Anthropocene. Case studies include the cryopreservation of endangered DNA in frozen zoos, nuclear waste management, seed biobanking, landscape rewilding, social history collecting, space messaging, endangered language documentation, built and natural heritage management, domestic keeping and discarding practices, and world heritage site management.

Organizational partnerships for food policy research impact Mabiso, Athur 2013-12-12 Recently discourse has grown about the importance of partnerships for adding value to agriculture research, strengthening policy capacities, and enhancing food policy impact on global food security and poverty reduction. However, the literature on partnerships specifically focusing on food policy research impact is still mostly emerging. This paper contributes to our understanding of food policy–research partnerships and provides a review of the theory and empirical literature about the factors that contribute to effective food policy–research partnerships. The literature points to the emergence of organizational partnerships as primarily driven by subjective perceptions about potential partners, the

complex and uncertain external environment, access to resources through partnership and expectations of potential impact of the partnership. Perceptions that are found to be important include trust, mutuality of partner goals, legitimacy of partner and the perception that partnering will achieve more than what one organization can accomplish independently through cost sharing, lower transactions costs and increased competitiveness. Effectively implementing each phase of the partnership cycle, from scoping to reviewing and revising, with effective communication throughout all phases, is critical to achieve high quality and impactful food policy–research partnerships.

Implementation Research in Health David H. Peters 2013 Interest in implementation research is growing, largely in recognition of the contribution it can make to maximizing the beneficial impact of health interventions. As a relatively new and, until recently, rather neglected field within the health sector, implementation research is something of an unknown quantity for many. There is therefore a need for greater clarity about what exactly implementation research is, and what it can offer. This Guide is designed to provide that clarity. Intended to support those conducting implementation research, those with responsibility for implementing programs, and those who have an interest in both, the Guide provides an introduction to basic implementation research concepts and language, briefly outlines what it involves, and describes the many opportunities that it presents. The main aim of the Guide is to boost implementation research capacity as well as demand for implementation research that is aligned with need, and that is of particular relevance to health systems in low- and middle-income countries (LMICs). Research on implementation requires the engagement of diverse stakeholders and multiple disciplines in order to address the complex implementation challenges they face. For this reason, the Guide is intended for a variety of actors who contribute to and/or are impacted by implementation research. This includes the decision-makers responsible for designing policies and managing programs whose decisions shape implementation and scale-up processes, as well as the practitioners and front-line workers who ultimately implement these decisions along with researchers from different disciplines who bring expertise in systematically collecting and analyzing information to inform implementation questions. The opening chapters (1-4) make the case for why implementation research is important to decision-making. They offer a workable definition of implementation research and illustrate the relevance of research to problems that are often considered to be simply administrative and provide examples of how such problems can be framed as implementation research questions. The early chapters also deal with the conduct of

implementation research, emphasizing the importance of collaboration and discussing the role of implementers in the planning and designing of studies, the collection and analysis of data, as well as in the dissemination and use of results. The second half of the Guide (5-7) detail the various methods and study designs that can be used to carry out implementation research, and, using examples, illustrates the application of quantitative, qualitative, and mixed-method designs to answer complex questions related to implementation and scale-up. It offers guidance on conceptualizing an implementation research study from the identification of the problem, development of research questions, identification of implementation outcomes and variables, as well as the selection of the study design and methods while also addressing important questions of rigor.

Development and the Next Generation 2006-01-01 "The theme of The World Development Report 2007 is youth - young people between the ages of 12 to 24. As this population group seeks identity and independence, they make decisions that affect not only their own well-being, but that of others, and they do this in a rapidly changing demographic and socio-economic environment. Supporting young people's transition to adulthood poses important opportunities and risky challenges for development policy. Are education systems preparing young people to cope with the demands of changing economies? What kind of support do they get as they enter the labor market? Can they move freely to where the jobs are? What can be done to help them avoid serious consequences of risky behavior, such as death from HIV-AIDS and drug abuse? Can their creative energy be directed productively to support development thinking? The report will focus on crucial capabilities and transitions in a young person's life: learning for life and work, staying healthy, working, forming families, and exercising citizenship. For each, there are opportunities and risks; for all, policies and institutions matter."

India in a Warming World Navroz K. Dubash 2019-09-17 Riven with scientific uncertainty, contending interests, and competing interpretations, the problem of climate change poses an existential challenge. For India, such a challenge is compounded by the immediate concerns of eradicating poverty and accelerating development. Moreover, India has played a relatively limited role thus far in causing the problem. Despite these complicating factors, India has to engage this challenge because a pathway to development innocent of climate change is no longer possible. The volume seeks to encourage public debate on climate change as part of India's larger development discourse. This volume brings together leading researchers and practitioners—negotiators, activists, and policymakers—to lay out the emergent debate on climate change in India. Through these chapters, the

contributors hope to deepen clarity both on why India should engage with climate change and how it can best do so, even while appreciating and representing the challenges inherent in doing so.

ASEAN Centrality and the ASEAN-US Economic Relationship Peter A. Petri 2014-02-21 The Association of Southeast Asian Nations (ASEAN) is strategically significant because of its size, dynamism, and role in the Asian economic and security architectures. This paper examines how ASEAN seeks to strengthen these assets through "centrality" in intraregional and external policy decisions. It recommends a two-speed approach toward centrality in order to maximize regional incomes and benefit all member economies: first, selective engagement by ASEAN members in productive external partnerships and, second, vigorous policies to share gains across the region. This strategy has solid underpinnings in the Kemp-Wan theorem on trade agreements. It would warrant, for example, a Trans-Pacific Partnership (TPP) agreement with incomplete ASEAN membership, complemented with policies to extend gains across the region. The United States could support this framework by pursuing deep relations with some ASEAN members, while broadly assisting the region's development.

Strategic Pragmatism Edgar H. Schein 1996-06-17 foreword by Lester Thurow Per capita income in Singapore has gone from \$500 to more than \$20,000 in a little over twenty-five years. Edgar Schein, a social psychologist with a long and celebrated research interest in organizational studies, examines the cultural history of the key institution that spawned this economic miracle. Through interviews and full access to Singapore's Economic Development

Board (EDB), Schein shows how economic development was successfully promoted. He delves into the individual relationships and the overall structure that contributed to the EDB's effectiveness in propelling Singapore, one of Asia's "little dragons" into the modern era. In his foreword, Lester Thurrow locates Schein's organizational and case-specific account within a larger economic and comparative framework. Over a period of two years, Schein studied how the EDB was created, the kind of leadership it provided, the management structure it used, the human resource policies it pursued, and how it influenced other organizations within the Singapore government. Schein sat in on EDB meetings and extensively interviewed current and former members of the board, Singapore's leaders who created the board, and businesspeople who have dealt with the board. His book intertwines the perspective of the board's members and its investor clients in an analysis that uses both organization and cross-cultural theory. Although there are currently studies of comparable Japanese and Korean organizations, this is the first detailed analysis of the internal structure and functioning of the economic development body of Singapore, a key player in the Asian and world markets.

Climate Information for Public Health Action Madeleine Thomson 2018-09-04 Public health professionals, field epidemiologists, health management workers and health policymakers are increasingly concerned about the potential impact that climate change can have on public health. Climate not only determines the spatial and seasonal distribution of many public health events, such as infectious diseases, health outcomes of disasters and nutrition, but also is a key determinant of extreme heat waves and storm events that result in large impacts on morbidity and mortality. However, few public health professionals are aware of the ways in which climate information may help them manage the impacts of climate on their disease surveillance and control activities, as well as program implementation and evaluation. Climate Information for Public Health Action fills an identified

knowledge gap for health policy makers and practitioners (along with climate service providers) in exploring why, when and how climate information can and should be incorporated into health decision-making. Drawing together contributions from a range of key thinkers in the field, this volume will focus on three climate sensitive health outcome areas: infectious disease, hydrometeorological disasters, and nutrition. Targeting a technical professional public health community involved in developing policy and/or ensuring good practice related to climate sensitive health outcomes, this book will be written in an accessible, informative style using the highest technical and scientific standards. It will also be a valuable resource for students and academics studying and working in the emerging field of environment and health.

Idea and Methods of Legal Research P. Ishwara Bhat 2019-09-05 Legal research examines subject matter enshrouded in social circumstances in order to conceptualize theories and prepare a future course of action. This dynamic, inter-disciplinary, and labyrinthine character of legal research requires researchers to be fluid, eclectic, and analytical in their approach. Idea and Methods of Legal Research unearths how the thinking process is to be streamlined in research, how a theme is built on the basis of comprehensive and intensive study, and the paths through which notions of objectivity, feminism, ethics, and purposive character of knowledge are to be understood. The book first explains the meaning, evolution, and scope of legal research, and discusses objectivity and ethics in legal research. It engages with the requirements, advantages, and limits of various doctrinal and non-doctrinal methods and tools, and the points to be considered in selecting a suitable method or combination of methods. It highlights analytical, historical, philosophical, comparative, qualitative, and quantitative methods of legal research. The book then goes on to discuss the use of multi-method legal research, policy research, action research, and feminist legal research and finally, reflects on research-based critical legal writing, as opposed to client-related legal writing. This book, thus, is a comprehensive answer to key questions one faces in legal research.

The Ethics of Cultural Competence in Higher Education Beverly A. Burnell 2015-02-11 This new book presents both research (qualitative, quantitative, and mixed-design) and conceptual chapters about the ethical factors to be considered in teaching, administration, and professional practice in higher education settings. The book includes recent research-based ideas in the field of higher education. Topics include cultural competencies for higher education faculty, professionals, and administrators, such as use of language in communicating concepts to students for whom English is not a first language, avoiding imposition of bias, encouraging exposition of perspective, and ethical practices for professionals working with the diverse environments and populations in higher education settings. This work is particularly important since becoming informed on the latest approaches and ideologies is an essential component of both professional preparation and continuing professional development of faculty, professionals, and administrators in higher education. Currently, education practitioners struggle with finding time for professional development and ways to inform themselves of the latest research. This volume will help education practitioners keep abreast of the most important recent research. As college student populations and environments continually change, so must the practices of the professionals who work with them. This volume highlights some of the most recent practices and perspectives in ethics and cultural competence for all college and university personnel. This volume is unique and valuable because other books have addressed culturally competent ethical practices for discrete professions within higher education, no single work has a collection of writings about

ethical and culturally competent practices for a variety of the professions in higher education.
