Under the Shadow of Nationalism Mariko Asano Tamanoi 1998-03-01 The contribution of rural women to the creation and expansion of the Japanese nation-state is undeniable. As early as the nineteenth century, the women of central Japan's Nagano prefecture in particular provided abundant and cheap labor for a number of industries, most notably the silk spinning industry. Rural women from Nagano could also be found working, from a very young age, as nursemaids, domestic servants, and farm laborers. In whatever capacity they worked, these women became the objects of scrutiny and reform in a variety of nationalist discourses--not only because of the importance of their labor to the nation, but also because of their gender and domicile (the countryside was the centerpiece of state ideology and practice before and during the war, during the Occupation, and beyond). Under the Shadow of Nationalism explores the interconnectedness of nationalism and gender in the context of modern Japan. It combines the author's long-term field research with a painstaking examination of the documents behind these discourses produced at various levels of society, from the national (government records, social reformers' reports, ethnographic data) to the local (teachers' manuals, labor activists' accounts, village newspapers). It provides a wide-ranging yet in-depth look at a key group of Japanese women as national subjects through the critical chapters of Japanese modernity and postmodernity.

Semiconductor Device Reliability A. Christou 2012-12-06 This publication is a compilation of papers presented at the Semiconductor Device Reliability Workshop sponsored by the NATO International Scientific Exchange Program. The Workshop was held in Crete, Greece from June 4 to June 9, 1989. The objective of the Workshop was to review and to further explore advances in the field of semiconductor reliability through invited paper presentations and discussions. The technical emphasis was on quality assurance and reliability of optoelectronic and high speed semiconductor devices. The primary support for the meeting was provided by the Scientific Affairs Division of NATO. We are indebted to NATO for their support and to Dr. Craig Sinclair, who administers this program. The chapters of this book follow the format and order of the sessions of the meeting. Thirty-six papers were presented and discussed during the five-day Workshop. In addition, two panel sessions were held, with audience participation, where the particularly controversial topics of burn-in and reliability modeling and prediction methods were discussed. A brief review of these sessions is presented in this book.

Flood and Coastal Erosion Risk Management Edmund Penning-Rowsell 2014-01-03 A new 'Multi-Coloured Manual' This book is a successor to and replacement for the highly respected manual and handbook on the benefits of flood and coastal risk management, produced by the Flood Hazard Research Centre at Middlesex University, UK, with support from Defra and the Environment Agency. It builds upon a previous book known as the "multi-coloured manual" (2005), which itself was a synthesis of the blue (1977), red (1987) and yellow manuals (1992). As such it expands and updates this work, to provide a manual of assessment techniques of flood risk management benefits, indirect benefits, and coastal erosion risk management benefits. It has three key aims. First it provides methods and data which can be used for the practical assessment of schemes and policies. Secondly it describes new research to update the data and improve techniques. Thirdly it explains the limitations and complications of Benefit-Cost Analysis, to guide decision-making on investment in river and coastal risk management schemes.

Drosophila Neurobiology Bing Zhang 2010 Based on Cold Spring Harbor Laboratory's long-running course, *Drosophila Neurobiology: A Laboratory Manual* offers detailed protocols and background material for researchers interested in using *Drosophila* as an experimental model for investigating the nervous system. This manual covers three approaches to the field: analysis of neural development, recording and imaging activities in the nervous system, and analysis of behavior. Techniques described include molecular, genetic, electrophysiological, imaging, behavioral and developmental methods.

Gastrointestinal Interventional Endoscopy Mihir S. Wagh 2019-11-16 This volume provides a concise yet comprehensive overview of advanced techniques in interventional endoscopy beyond ERCP and EUS. Comprised of sections on endoscopic resection (including EMR, ESD, STER and EFTR), bariatric endoscopy, endoscopic myotomy (POEM, GPOEM, ZPOEM and PREM), endoscopic anti-reflux therapies, endoscopic tissue apposition, and advances in interventional EUS, the text highlights indications and technical details, assesses safety and efficacy, and provides quality metrics and training pathways for these endoscopic procedures. The book is also accompanied by multiple photos and videos illustrating these endoscopic techniques. Written by world renowned experts in the field, *Gastrointestinal Interventional Endoscopy: Advanced Techniques* is a valuable resource for gastroenterologists and surgeons interested in the latest advances in interventional endoscopy.

Canmaking Terry A. Turner 2013-04-17 Metal protectin, including both metal treatments and coating systems. affords mutual protection for both can and contents. this book is the first reference to meld the knowledge of chemical companies and canmaking companies, covering materials and processes used in both protective and decorative aspects of metal packaging. Topics include basic substrates (aluminum and steel), demands of the markets served, basic metal-forming processes, and the specific decorative and protective needs of different packaging types, with emphasis give to the technologies most likely to be used, such as ultraviolet curing. This practical reference gives readers a background and familiarity with terminology and technology and gives insight into why certain technologies are used over others.

MEDINFO 92 K. C. Lun 1992 The field of medical informatics has steadily matured and MEDINFO 92 shows an upturn in the uses of informatics in the health sector. This volume contains significant contributions on diverse issues, a popular field being knowledge-based work: concepts, methodologies, software and other tools, systems and evaluations of systems and experiences. Several papers describe functional integration between differing systems, institutions and even geographic areas; they confirm a trend towards having knowledge-based systems contained in, or integrated with, overall management information systems serving the physician as well as the rest of the health support team. As well as contributions on those topics that have been covered in MEDINFO congresses since their inception in 1974, such as bibliographic systems, nursing informatics and hospital information systems, other issues addressed include data standards such as semantics, syntax and communication standards; the quality, accuracy and ethical values of medical data; and developments in networking.

3D Printing in Medicine Frank J. Rybicki 2017-09-27 This book describes the fundamentals of three-dimensional (3D) printing, addresses the practical aspects of establishing a 3D printing service in a medical facility, and explains the enormous potential value of rendering images as 3D printed models capable of providing tactile feedback and tangible information on both anatomic and pathologic states. Individual chapters also focus on selected areas of applications for 3D printing, including musculoskeletal, craniomaxillofacial, cardiovascular, and neurosurgery applications. Challenges and opportunities related to training, materials and equipment, and guidelines are addressed, and the overall costs of a 3D printing lab and the balancing of these costs against clinical benefits are discussed. Radiologists, surgeons, and other physicians will find this book to be a rich source of information on the practicalities and expanding medical applications of 3D printing.

Non-Invasive Sperm Selection for In Vitro Fertilization Ashok Agarwal 2014-08-12 Non-Invasive Sperm Selection for In Vitro Fertilization summarizes and discusses the relevant literature on the various advanced sperm selection methods used in modern Assisted Reproductive Technologies (ART). Chapters review some of the major unresolved issues in the field, the feasibility and success of the various sperm selection methods, their safety and the effects they have on sperm quality and ART outcomes. The book makes recommendations on clinical applications and future research, while helping to elucidate the benefits and promise of non-invasive sperm selection techniques. A distinguished team of scientists, embryologists, and urologists, with expertise in male infertility and ART, contributes to this original and valuable reference guide meant for academics, researchers, and professionals in the field of reproductive medicine who need an update on the current status of the study and practice of non-invasive sperm selection techniques.

Handbook of Print Media Helmut Kipphan 2014-02-27 Printers nowadays are having to learn new technologies if they are to remain competitive. This innovative, practical manual is specifically designed to cater to these training demands. Written by an expert in the field, the

Handbook is unique in covering the entire spectrum of modern print media production. Despite its comprehensive treatment, it remains an easy-to-use, single-volume reference, with all the information clearly structured and readily retrievable. The author covers both traditional as well as computer-aided technologies in all stages of production, as well as electronic media and multimedia. He also deals with training, research, strategies and trends, showing readers how to implement the latest methods. With 1,200 pages, containing 1,500 illustrations - over half in colour - the Handbook conveys the current state of technology together with its specific terminology. The accompanying CD-ROM includes the entire manual in fully searchable form, plus additional software tools. Invaluable information for both beginners and "old hands" in printing works, publishing houses, trade associations, the graphics industry, and their suppliers.

Make Life Visible Yoshiaki Toyama 2019-10-02 This open access book describes marked advances in imaging technology that have enabled the visualization of phenomena in ways formerly believed to be completely impossible. These technologies have made major contributions to the elucidation of the pathology of diseases as well as to their diagnosis and therapy. The volume presents various studies from molecular imaging to clinical imaging. It also focuses on innovative, creative, advanced research that gives full play to imaging technology in the broad sense, while exploring cross-disciplinary areas in which individual research fields interact and pursuing the development of new techniques where they fuse together. The book is separated into three parts, the first of which addresses the topic of visualizing and controlling molecules for life. The second part is devoted to imaging of disease mechanisms, while the final part comprises studies on the application of imaging technologies to diagnosis and therapy. The book contains the proceedings of the 12th Uehara International Symposium 2017, "Make Life Visible" sponsored by the Uehara Memorial Foundation and held from June 12 to 14, 2017. It is written by leading scientists in the field and is an open access publication under a CC BY 4.0 license.

Innovation in Pricing Andreas Hinterhuber 2013-05-07 Pricing has a substantial and immediate impact on profitability. Most companies, however, still use costs or competition as a main basis for setting prices. Product or business model innovation has a high priority for many companies whereas innovation in pricing has received scant attention. This book examines how innovation in pricing can drive profits. The text examines innovation in pricing from four complementary perspectives. Innovation in Pricing Strategy illustrates how companies implement innovative pricing strategies, such as customer value-based pricing. Innovation in Pricing Tactics deals with innovative tools to measure and increase customer willingness to pay and to communicate value to B2B and B2C customers. Innovation in Organizing the Pricing Function looks at state-of-the-art approaches to embed the pricing function in the organization. Psychological Aspects of Pricing illustrates how companies can influence customer perceptions of value and price in their quest to implement innovation in pricing. This edited volume brings together 26 articles from academics, business practitioners and consultants. Authors are from the world's largest companies, leading research-based universities and consulting companies specialized in pricing. This book is the only book dedicated to innovation in pricing and an essential read for business executives and pricing managers wishing to treat innovation in pricing as seriously as they treat product or business model innovation.

Cosmic Rays at Earth P.K.F. Grieder 2001-07-27 In 1912 Victor Franz Hess made the revolutionary discovery that ionizing radiation is incident upon the Earth from outer space. He showed with ground-based and balloon-borne detectors that the intensity of the radiation did not change significantly between day and night. Consequently, the sun could not be regarded as the source of this radiation and the question of its origin remained unanswered. Today, almost one hundred years later the question of the origin of the cosmic radiation still remains a mystery. Hess' discovery has given an enormous impetus to large areas of science, in particular to physics, and has played a major role in the formation of our current understanding of universal evolution. For example, the development of new fields of research such as elementary particle physics, modern astrophysics and cosmology are direct consequences of this discovery. Over the years the field of cosmic ray research has evolved in various directions: Firstly, the field of particle physics that was initiated by the discovery of many so-called elementary particles in the cosmic radiation. There is a strong trend from the accelerator physics community to reenter the field of cosmic ray physics, now under the name of astroparticle physics. Secondly, an important branch of cosmic ray physics that has rapidly evolved in conjunction with space exploration concerns the low energy portion of the cosmic ray spectrum. Thirdly, the branch of research that is concerned with the origin, acceleration and propagation of the cosmic radiation represents a great challenge for astrophysics, astronomy and cosmology. Presently very popular fields of research have rapidly evolved, such as high-energy gamma ray and neutrino astronomy. In addition, high-energy neutrino astronomy may soon initiate as a likely spin-off neutrino tomography of the Earth and thus open a unique new branch of geophysical research of the interior of the Earth. Finally, of considerable interest are the biological and medical aspects of the cosmic radiation because of its ionizing character and the inevitable irradiation to which we are exposed. This book is a reference manual for researchers and students of cosmic ray physics and associated fields and phenomena. It is not intended to be a tutorial. However, the book contains an adequate amount of background materials that its content should be useful to a broad community of scientists and professionals. The present book contains chiefly a data collection in compact form that covers the cosmic radiation in the vicinity of the Earth, in the Earth's atmosphere, at sea level and underground. Included are predominantly experimental but also theoretical data. In addition the book contains related data, definitions and important relations. The aim of this book is to offer the reader in a single volume a readily available comprehensive set of data that will save him the need of frequent time-consuming literature searches.
