Analysis of Sensory Properties in Foods Edgar Chambers IV 2019-08-23 The sensory properties of foods are the most important reason people eat the foods they eat. What those properties are and how we best measure those properties are critical to understanding food and eating behavior. Appearance, flavor, texture, and even the sounds of food can impart a desire to eat or cause us to dismiss the food as unappetizing, stale, or even inappropriate from a cultural standpoint. This Special Issue focuses on how sensory properties are measured, the specific sensory properties of various foods, and consumer behavior related to which properties might be most important in certain situations and how consumers use sensory attributes to make decisions about what they will eat. This Special Issue contains both research papers and review articles.

Tapi apakah Anda tahu bahwa dengan tips dan trik tertentu apalagi dengan didukung semakin berkembangnya teknologi kamera pada ponsel itu sendiri, kita bisa menghasilkan foto yang hasilnya tidak kalah dengan foto yang diambil dengan kamera digital. Tidak hanya hal-hal yang biasa kita temui dalam teori fotografi saja seperti aspek angle, komposisi dan pencahayaan (lighting) yang bisa kita aplikasikan untuk memotret dengan kamera ponsel, namun berbagai jenis editing yang biasa dilakukan dengan software pengolah foto profesional seperti High Dynamic Range (HDR), Black and White (BW), sampai noir effect juga bisa dilakukan di ponsel. Selain itu, ukuran ponsel yang relatif kecil dan tidak terlalu mencolok, sangat memudahkan untuk dibawa dan digunakan. Android sebagai mobile operating system yang dikembangkan oleh Google, saat ini berkembang menjadi salah satu platform yang paling berkembang baik dari sisi jumlah pengguna maupun variasi perangkat yang tersedia. Using Inertial Sensors for Position and Orientation Estimation Manon Kok 2017 In recent years, microelectromechanical system (MEMS) inertial sensors (3D accelerometers and 3D gyroscopes) have become widely available due to their small size and low cost. Inertial sensor measurements are obtained at high sampling rates and can be integrated to obtain position and orientation information. These estimates are accurate on a short time scale, but suffer from integration drift over longer time scales. To overcome this issue, inertial sensors are typically combined with additional sensors and models. In this tutorial we focus on the signal processing aspects of position and orientation estimation using inertial sensors. We discuss different modeling choices and a selected number of important algorithms. The algorithms include optimization-based smoothing and filtering as well as

computationally cheaper extended Kalman filter and complementary filter implementations. The quality of their estimates is illustrated using both experimental and simulated data.

Nutrition and Eye Health John Lawrenson 2020-01-03 Blindness and visual impairment impact significantly on an individual's physical and mental well-being. Loss of vision is a global health problem, with approximately 250 million of the world's population currently living with vision loss, of which 36 million are classified as blind. Visual impairment is more frequent in the elderly, with cataract and age-related macular degeneration (AMD) accounting for over 50% of cases globally. Oxidative stress has been strongly implicated in the pathogenesis of both conditions, and consequently the role of nutritional factors, in particular carotenoids and micronutrient antioxidants, have been investigated as possible preventative or therapeutic strategies. Dry eye syndrome (DES) is one of the most common ophthalmic conditions in the world. DES occurs where the eye does not produce enough tears and/or the tears evaporate too quickly leading to discomfort and varying degrees of visual disturbance. There has recently been a great deal of interest in the potential for oral or topical supplementation with essential fatty acids (EFAs), specifically omega-3 and omega-6 fatty acids, as an adjunct to conventional treatments for DES. The objective of this Special Issue on 'Nutrition and Eye Health' is to publish papers describing the role of nutrition in maintaining eye health and the use of nutritional interventions to prevent or treat ocular disease. A particular (but not exclusive) emphasis will be on papers (reviews and/or clinical or experimental studies) relating to cataract, AMD and DES.
