The Army Combat Fitness Test U. S. Army 2020-02-29 Our nation's greatest assets - our Soldiers - face a dynamic, competitive, and lethal operational environment (OE) that has evolved in recent years, one in which our adversaries will employ a mix of traditional, unconventional, and hybrid strategies. Our Army's physical readiness program must evolve to keep pace with the demands of modern war - our physical fitness test must evolve as well. Based on results of years of scientific study, the Secretary and Chief of Staff of the Army have directed replacement of the Army Physical Fitness Test (APFT). While the legacy APFT is an acceptable test for measuring general fitness, it does not adequately assess the domains of combat physical fitness. The six-event Army Combat Fitness Test (ACFT) was developed to better predict a Soldier's readiness for the demands of the modern battlefield. Like combat, the ACFT is both age and gender neutral. The desired end-states of ACFT implementation are an increase in physical readiness...

The Official U.S. Army Fitness Training Handbook Department of the Army
2021-12-09 A soldier's level of physical fitness has a direct impact on his combat readiness. The many battles in which American troops have fought underscore the important role physical fitness plays on the battlefield. The renewed nationwide interest in fitness has been accompanied by many research studies on the effects of regular participation in sound physical fitness programs. The overwhelming conclusion is that such programs enhance a person's quality of life, improve productivity, and bring about positive physical and mental changes. Not only are physically fit soldiers essential to the Army, they are also more likely to lead enjoyable, productive lives. This manual is primarily concerned with issues relating directly to the development and maintenance of the five components of physical fitness:

- ØCardiorespiratory (CR) endurance--the efficiency with which the body delivers oxygen and nutrients needed for muscular activity and transports waste products from the cells.
- ØMuscular strength--the greatest amount of force a muscle or muscle group can exert in a single effort.
- ØMuscular endurance--the ability of a muscle or muscle group to perform repeated movements with a submaximal force for extended periods of time.
- ØFlexibility--the ability to move the joints (for example, elbow or knee) or any group of joints through an entire, normal range of motion.
- ØBody composition--the amount of body fat a soldier has in comparison to his total body mass.

Bodies for Battle Garrett Gatzemeyer 2021 "War is physical. In combat, fortune favors the soldier in better condition. Superior conditioning enables troops to fight longer and harder, to move farther and faster, to carry heavier loads and endure greater hardship. These relative advantages can be the difference between life and death, victory and defeat. In Bodies for Battle, Garrett Gatzemeyer investigates the creation and evolution of an official U.S. Army physical culture during the period when the most significant changes

were made: 1885 to 1957. Using archival documents, training manuals, and professional journals serving military officers and physical educators, Gatzemeyer shows how, beginning in the late nineteenth century, officers drew on contemporary popular fitness culture and the professionalizing field of physical education to craft an associated system of exercise that has informed approaches to physical training in the U.S. Army ever since"--

Assessing Fitness for Military Enlistment National Research Council 2006-02-27 The U.S. Department of Defense (DoD) faces short-term and long-term challenges in selecting and recruiting an enlisted force to meet personnel requirements associated with diverse and changing missions. The DoD has established standards for aptitudes/abilities, medical conditions, and physical fitness to be used in selecting recruits who are most likely to succeed in their jobs and complete the first term of service (generally 36 months). In 1999, the Committee on the Youth Population and Military Recruitment was established by the National Research Council (NRC) in response to a request from the DoD. One focus of the committee's work was to examine trends in the youth population relative to the needs of the military and the standards used to screen applicants to meet these needs. When the committee began its work in 1999, the Army, the Navy, and the Air Force had recently experienced recruiting shortfalls. By the early 2000s, all the Services were meeting their goals; however, in the first half of calendar year 2005, both the Army and the Marine Corps experienced recruiting difficulties and, in some months, shortfalls. When recruiting goals are not being met, scientific guidance is needed to inform policy decisions regarding the advisability of lowering standards and the impact of any change on training time and cost, job performance, attrition, and the health of the force. Assessing Fitness for Military Enlistment examines the current physical, medical, and mental health standards for military enlistment in light of (1) trends in the physical condition of the youth population; (2) medical advances for treating certain conditions, as well as knowledge of the typical course of chronic conditions as young people reach adulthood; (3) the role of basic training in physical conditioning; (4) the physical demands and working conditions of various jobs in today's military services; and (5) the measures that are used by the Services to characterize an individual's physical condition. The focus is on the enlistment of 18- to 24-year-olds and their first term of service.

U. S. Army Board Study Guide 2006-06-01

A Historical Review and Analysis of Army Physical Readiness Training and

Assessment Whitfield East 2013-12 "The Drillmaster of Valley Forge-Baron Von Steuben-correctly noted in his "Blue Book" how physical conditioning and health (which he found woefully missing when he joined Washington's camp)

would always be directly linked to individual and unit discipline, courage in the fight, and victory on the battlefield. That remains true today. Even an amateur historian, choosing any study on the performance of units in combat, quickly discovers how the levels of conditioning and physical performance of Soldiers is directly proportional to success or failure in the field. In this monograph, Dr. Whitfield "Chip" East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers for the physical demands of combat. Our culture is becoming increasingly "unfit," due to poor nutrition, a lack of adequate and formal exercise, and too much technology. Still, the Soldiers who come to our Army from our society will be asked to fight in increasingly complex and demanding conflicts, and they must be prepared through new, unique, and scientifically based techniques. So while Dr. East's monograph is a fascinating history, it is also a required call for all leaders to better understand the science and the art of physical preparation for the battlefield. It was and is important for us to get this area of training right, because getting it right means a better chance for success in combat.
